

# Why is the corner of the module tile green/red

If the tile has a **green** corner, the module has been completed

If the tile has a **red** corner, the module has been started but **not** completed

The screenshot shows the National Instruments Modules page for Analog Electronics. The page header includes the National Instruments logo, 'Courses Support', and 'Admin Portal'. The main heading is 'Modules' with a sub-heading 'Analog Electronics' and a description 'Description: Analog Electronics for ELVIS III'. There are two buttons: 'Show All Modules' and 'Hide Finished Modules'. Below the heading, there are four module tiles, each with a different corner color:

- Tile 1:** 'INTRODUCTION TO ANALOG ELECTRONICS' with a green corner in the top-right.
- Tile 2:** 'DIODES' with a green corner in the top-right.
- Tile 3:** 'DIODES IN A RECTIFIER' with a red corner in the top-right.
- Tile 4:** 'ZENER DIODES' with a red corner in the top-right.

If the tile has **no colored** corner, the module has not been started
