Accelerate Student Discovery

Engineering educators are preparing students to design the systems that will tackle the world's grand challenges. This requires engaging, hands-on curriculum that inspires students and puts theory into practice. Hear from one of our authors on how the studio-style curriculum at the University of Virginia improved student engagement. Then, browse our portal to find open-ended projects and ABET-aligned laboratories to accelerate student discovery in key topics and application areas.

Analog Electronics

This lab manual is heavily focused on silicon-based components, such as diodes and bipolar junction transistors. In each lab, after a review of theory, students will simulate circuits to learn about each component's behaviors, characteristics, and applications. Then they will build electronic circuits to further validate and analyze the behavior. At the end of each lab, students complete long answer questions to evaluate their overall understanding of the concepts.
